

What is claimed:

1. A method for the synthesis of a dihydroindole C-ring of a CC-1065 / duocarmycin analog wherein the method comprises the 5 steps of:

Step A: alkylating an aryl halide with 1,3-dichloropropene and a catalytic amount of n-tetrabutylammonium iodide for forming a vinyl chloride; then

Step B: cyclizing the vinyl chloride of said step A under conditions using tributyltin hydride, catalytic AIBN and toluene as the solvent for forming the dihydroindole C-ring of the CC-1065 / duocarmycin analog.

2. A compound represented by the following structure:

3. A compound represented by the following structure:

4. A compound represented by the following structure:

5. A compound represented by the following structure:

5

6. A compound represented by the following structure:

- 10 7. A compound represented by the following structure:

8. A compound represented by the following structure:

5

9. A compound represented by the following structure:

10. A compound represented by the following structure:

10

11. A compound represented by the following structure:

12. A compound represented by the following structure:

5 13. A compound represented by the following structure:

14. A compound represented by the following structure:

10

15. A compound represented by the following structure:

16. A compound represented by the following structure:

15

17. A compound represented by the following structure:

5 18. A compound represented by the following structure:
